Title:

Graphical user interface using historical data

Description:

This patent describes a graphical user interface (GUI) that uses historical data to assist users in decision-making processes. The GUI displays relevant historical data in an intuitive format, allowing users to analyze trends and patterns over time. This can be applied in various domains, including finance, healthcare, and logistics, to improve efficiency and accuracy in decision-making. The system also includes methods for retrieving, processing, and presenting the historical data in a user-friendly manner.
